MOSAIC-AML - mutation-calling performance by model and cohort

Bulk model ① is BeatAML2-trained (bulk RNA, no imputation); multimodal ② is single-cell-trained (8 modalities). Both operate at the F1-max threshold; in all-sc CV that threshold is chosen on the vector it is scored on, so those absolute rates are optimistic and only contrasts between arms are fair.
Rows a mean leaves out: an umbrella category listed beside its subtypes, a second model head for one lesion, a category with no positives.
