

Venetoclax — the worked example

measurements (specimens)

363

Spearman, predicted vs measured AUC

0.766

AUROC, sensitive vs resistant tail

0.977

AUPRC

0.970 (baseline 0.482)

RMSE on the raw AUC scale

52.3 (cohort SD 79.6)

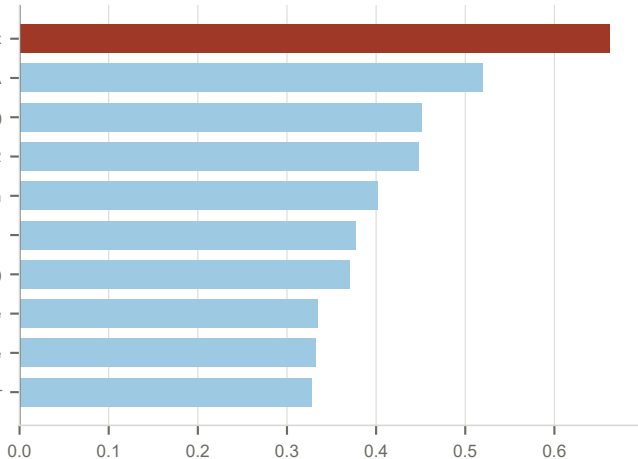

fusion weights (RNA/state/mut/clin)

0.26/0.43/0.15/0.20

Venetoclax is the best-predicted inhibitor in the panel. Its fusion leans hardest on the differentiation-state block, matching the published account that monocytic AML is relatively venetoclax-resistant and primitive AML relatively sensitive.

**Model B, never shown a cell-state label in training
venetoclax ranks 1/118, positive in 93% of samples**

Venetoclax
GSK-1838705A
AZD1152-HQPA (AZD2811)
PHA-665752
Artemisinin
SR9011
Pelitinib (EKB-569)
Azacytidine
Lenalidomide
NF-kB Activation Inhibitor

predicted sensitivity: primitive states minus monocytic states
